Computers change how I
experience my world

The Evolution of Computing

I believe we are moving towards a possible future where virtual content is indistinguishable in every way from physical content.

If we don't make interpersonal interaction in XR work, these technologies could fragment and divide our experiences.

Observable behaviours give us insights into how interpersonal interaction is unfolding.

VRTogether

Key Takeaways

- Proxemic interactions are congruent with those in physical environments, although VEs are not constrained by physics
- Instrumented approach can provide insights into the effect of the environment textures, shapes, and design.
- Quantitative data can answer questions on social behaviours, such as group formation, social translucence, and social cues

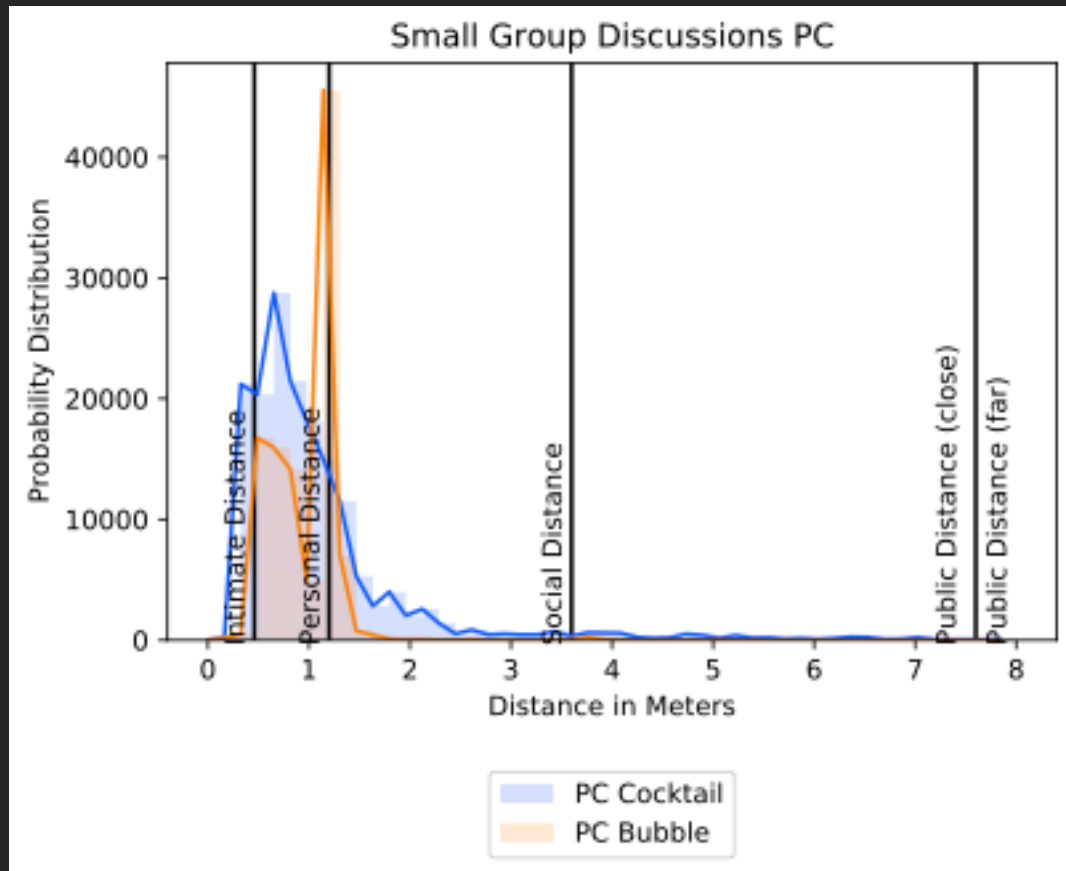

Digital proxemics describe how we use space in virtual environments (VEs) and how the presence of others influences our behaviours, interactions, and movements.

Evaluation

- VR versus Desktop Display
- Inverse versus Exponential Audio

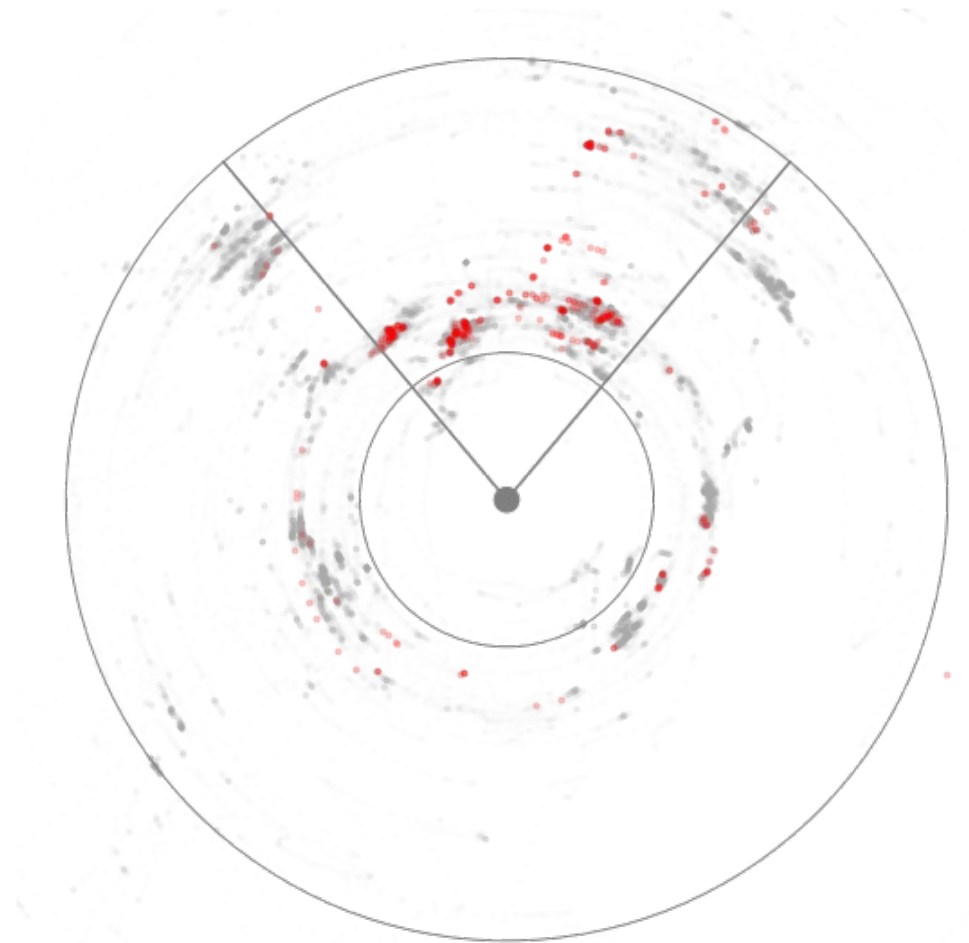

Small Group and Large Group

Performing Attention

Desktop PC

HMD

Key Takeaways

Designing effective experiences for virtual environments requires an intricate knowledge of how people make use of and behave in virtual spaces

Although this research only scratches the surface of the broader challenges, we hope this inspires future research into digital proxemics and improves how we collaborate and socialise in virtual environments in the future

All of the code, data, and notebooks used in this research are available open source in the ACM DL

Visualising Social Metrics

This notebook generates all the proxemic figures used in [our paper](#) on *Proxemics and Social Interactions in an Instrumented Virtual Reality Workshop*.

Using this Notebook, Code, or Data

This notebook and all of the resources included here are released on a [Mozilla Public License 2.0](#). The data is released under [CC-BY-NC-SA 4.0](#). To cite the paper, the bespoke logging client, the dataset, or this notebook please see the [README.md](#) or the [DOI in the ACM Digital Library](#).

Requirements

```
In [2]: import pickle
import pandas as pd
import numpy as np
import scipy
from scipy import spatial
from PIL import Image
import seaborn as sns
import matplotlib.pyplot as plt
%matplotlib inline
# %matplotlib notebook
```

Load our past pickles and csv data.

Supplemental code and dataset for the [ACM CHI 2021 paper](#) on "[Proxemics and Social Interactions in an Instrumented Virtual Reality Workshop](#)". In this research paper we [instrumented Mozilla Hubs Cloud](#) to record where participants where during the event. From there, we measured proxemic and plotted the activity along with some semi-structured interviews.

Open Challenges in Social XR

- Models of XR that capture human experience across the XR continuum
- Design to stabilize interpersonal interaction
- Improve the quality of interpersonal interaction in XR

Open Science isn't Just About Data

- My funding proposals from past applications (with some commentary) are available

What does it mean to stabilize
interaction across the XR
continuum?

Thank You

Dr Julie Rico Williamson
